The ESC Server Management Program

Are your ESC|StackVision servers healthy? Do you have personnel dedicated to managing your servers on an ongoing basis? If not, ESC has the solution for you!

Managing your DAS servers can be a time-consuming challenge that requires database administration experience and the expertise of an IT professional. Because ESC realizes that you may not have the time to implement updates caused by constant changes in technology, we have created the Server Management Program.

Designed to ensure that you are up-to-date and can recover from disaster, ESC's CEMS DAS IT experts will work with your DAS servers, managing everything from SQL maintenance, optimization and updates to Operating Systems, drive management and disaster recovery.

Server Management Program Includes:

- **Server Backups** including the management of backup tasks for SQL database and application-specific data, scheduling of full and differential backups, verifying successful completion of backup files and more!
- **Data Management** involving the coordination of purge schedules for data records.
- **Software Updates** including the installation of operating system, Microsoft® SQL, anti-virus and ESC|StackVision releases.
- **SQL Maintenance** including the implementation of SQL maintenance plans, integrity checks, index optimization and more!
- **Server Monitoring** of CPU, memory, disk space, event logs and performance.
- **Disaster Recovery** involving the rebuilding of server software and data in the event of a disaster.

Contact your Senior Account Executive today for more information on the Server Management Program!
